

Scope of works

Beatties replaced x3 hot water cylinders and upgraded the basin thermostatic mixing valves (TMV) to the male, female, disabled and baby change toilet areas in the shopping centre.

Overview

Beatties were employed to carry out the replacement works of x3 Megaflo direct unvented hot water cylinders, plus all associated system components and pipe work.

The heaters were replaced to ensure the correct water temperatures are supplied to the toilet basin thermostatic mixing valves (TMV) to meet the latest regulations and eliminate any potential risk of legionnaire's disease. The system was chlorinated on completion of works.

Podium Toilets

LOCATION: Southampton
CLIENT: ABM Technical Solutions

Beatties also carried out the disconnection and reconnection of electrical supplies, plus new supplies for the secondary hot water pumps.

The new water heaters have been integrated into the BMS system allowing the centre to have closer control, which assists with energy savings.
