

# Scope of works

For around 3 or 4 years this project has been off and on but we finally completed it just recently and we look forward to the new tenant taking their space.

Works included the installation of 100A power supply, data, sprinklers, water and drainage to create a new commercial space in a Shopping Centre.

# New Commercial Tenant Supplies

Main Contractor

LOCATION: Westquay  
Shopping Centre

# Overview

The first step was careful analysis of the existing structure to plan our routes and we then worked overnight to complete the install with no disturbance to the trading Centre.

We also managed to take up an engineered tongue and grooved oak floor to install the drainage and put it back with very little sign that we had been there!

We handed over the job early exceeding the programme and assisted with showing the new tenant around so that they could understand how the installation functioned.
